RISK DISCLOSURE NOTICE

GEEDEY CAPITAL LIMITED

The following statement outlines the risks associated with purchasing or selling Contract for Difference (CFD) derivatives, which provide synthetic exposure to various securities. It is crucial for investors to fully understand these risks before making any decisions. This statement provides some information regarding CFD risks, but it may not explain how these risks relate to the individual investor's circumstances. Therefore, it is recommended that investors carefully consider their financial position and seek professional advice if they are unsure.

Investors must remain aware of the risks involved in CFD trading, have adequate financial resources to bear such risks, and regularly monitor their CFD orders, CFDs, and Margin Accounts. It is essential to note that CFDs can result in substantial losses, and investors may lose more than the initial amount they invested, including Margin Adjustment Payments paid into the Margin Account. This is because CFD trading only requires depositing a small percentage of the total trade value, but profits and losses can quickly exceed the required margin amount. If the market moves against a Long or Short CFD Position, an investor may sustain more than a total loss of Margin in the Margin Account in a relatively short time.

It is important to note that CFDs are over-the-counter (OTC) derivatives and are not traded on any exchange. Each CFD purchased or sold through the trading platform results in an agreement with GEEEDY CAPITAL LIMITED, the issuer of the CFD. These contracts cannot be closed with anyone else, and investors are exposed to the risk of any Market Maker default. CFD trading is not guaranteed by an exchange.

CFDs are highly volatile, and their high degree of "gearing" or "leverage" can result in substantial gains or losses. The Required Margin Amount when compared to the value of the underlying Reference Securities is relatively modest. Therefore, a small market movement can result in substantial losses exceeding the Margin in the Margin Account. The investor must ensure that there is sufficient Margin available in the Margin Account when Long or Short CFD Positions are outstanding. A decline in the Reference Securities' value may result in the Market Maker requiring the investor to make Margin Adjustment Payments to avoid forced Close-out of relevant CFDs or other existing CFDs. The investor is responsible for any losses incurred and any shortfall in the Margin Account after such Close-out.

The Market Maker may increase Required Margin Amounts and other rates at any time as market conditions or otherwise its discretion. These changes may take effect immediately and may require the investor to make a Margin Adjustment Payment as communicated. Failure to make such a payment may lead to the Close-out Procedure detailed in your Agreement with the Market Maker.

Under certain market conditions, it may be difficult or impossible to Close-out a CFD. This may occur, for example, where trading on the Reference Security Exchange is suspended or restricted at times of rapid price movement. If there is no liquidity in the relevant Reference Security, the investor may be unable to trade CFDs referencing that Reference Security.

Finally, it is important to note that a CFD does not entitle either party to any right, title, or interest in any Reference Securities. It does not entitle either party to any voting rights or other rights of corporate action in respect of the Reference Securities or oblige either party to acquire, receive, hold, deliver, or dispose of any Reference Securities or other securities. This statement may not disclose all risks of purchasing and selling CFDs, and investors should seek professional advice on any legal, regulatory, credit, tax, or accounting aspects that may be applicable to any CFD.
